Community Wide Landscape Evaluations Performed

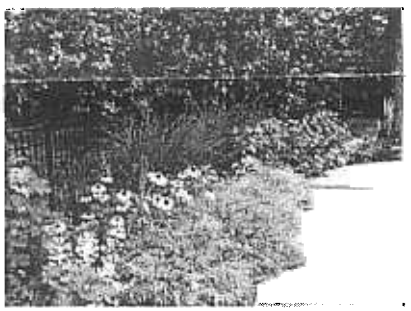
Pulte Homes has been dedicated in providing each of their communities with outstanding landscape features that far exceed industry standards. From the front entrance plantings to the naturalized areas, homeowners have the amenities of walking/bike trails, open spaces and lookout areas that are fully landscaped.

Maintaining the beauty of your community is our primary goal. We understand that the landscape is an asset to your community. We are here to protect that asset, and are proud to be a part of a comprehensive plant health care program that has been developed by professional landscape consultants and implemented by Pulte Homes.

The landscape consultants are professionals that have extensive backgrounds in horticulture and have been contracted to monitor and evaluate the plant material in your Pulte Homes community.

Evaluations will document dying/dead plant material that needs to be removed and replaced, monitor for insects and diseases to initiate a spray program if needed, and to identify species, quantity and planting locations of newly installed plant material to guarantee all trees and shrubs are installed per the landscape plan for the community. The landscape consultants are working closely with the landscape contractors and Property Specialists, Inc. to make recommendations and to assure that the landscape issues will be addressed in a timely manner.

We have been performing inspections since the spring with successful results. Our fall schedule includes a comprehensive landscape evaluation of the community in September. In October our landscape consultants will be verifying plant replacement recommendations from their spring/summer inspections. A final site walk of the community will be held in early November with the landscape consultants, property managers, landscape contractors and homeowners.



This is a very exciting program where we can all be involved in the beautification of our community, protect our landscape assets and promote an overall long term plant health care program.

Should a homeowner have any questions, comments or concerns regarding the landscape in their community they should contact Property Specialists, Inc. We will forward the information onto the landscape consultants who will address your concern at their next evaluation. By working together our communities will grow for generations to come while achieving the overall intended landscape design.
